PDF to Text OCR Converter Command Line

What is OCR (Optical Character Recognition)?

Optical Character Recognition (OCR) is a visual recognition process that turns printed or written text into an electronic character-based file. A document that is scanned and converted into a PDF document provides the basis for which character recognition software may interpret each character image on the PDF and assign it an electronic character-based file that can then be entered into an editable format, such as a Text or Word document.

Given the proliferation of scan-to-PDF technology available today, VeryPDF's OCR solutions focus on the conversion of scanned PDF documents and image files. The quality of the OCR conversion process will largely depend on the quality of the scanned image and the clarity of the characters of that image.

VeryPDF's PDF to Text OCR Converter is a Command Line application uses Optical Character Recognition technology to OCR scanned PDF documents and images (TIFF, BMP, PNG, JPG, PCX, TGA, etc.) to editable text files.

The default package of PDF to Text OCR Converter Command Line includes support for only English. However you can download more OCR language packs at [here](#).
